

SOLTECSIS

TECHnological **SOL**utions in **SY**stems

SOLTECSIS is a technology company founded in 2008, specialized in the information technology and custom software development sectors. We have highly qualified and experienced technical personnel, which guarantees quality in all our products and services. Creativity and enthusiasm for doing new things are the main gears that have moved SOLTECSIS throughout its existence. The wide variety of products and services that we have created over the years are irrefutable proof of this.

We are experts in virtualization, with Proxmox being the hypervisor that we use in the virtualization infrastructures that we implement for our clients. Since our inception we have been close partners of Proxmox and we are proud to be the only official trainer for Proxmox VE in the Spanish language. We have provided Proxmox training to a large number of countries in Central and South America, as well as throughout Spain and several countries in Europe. Since we also offer Proxmox consulting and integration services, many of the clients we have trained have also hired us for IT consulting services to design and implement their virtualization infrastructures.

We are also experts in the field of networks and security. Our highly qualified and experienced team is dedicated to designing and implementing comprehensive solutions for companies' computer security. This includes creating and deploying efficient network topologies, establishing secure communications between sites, implementing firewalls, configuring VPNs for secure access, and establishing robust security policies. In short, we take care of all the necessary aspects to guarantee an optimal level of computer security in any business environment.

Our history goes hand in hand with free software, with all those people who selflessly make their creations available to everyone. We underline our strong commitment to free software, reflected in our philosophy of providing open and flexible technological solutions. An example of this is our firewall management solution, FWCloud, which represents our active contribution to the Open Source community and reflects our gratitude to an invaluable source of knowledge and collaboration.

Our services

01_ **VIRTUALIZATION**
Save space and resources
Virtualize servers and PCs

02_ **PROXMOX VE**
Hyperconverged virtualization
and with data resilience

03_ **NETWORKS & SECURITY**
Protected networks
Secure communications

04_ **FWCLOUD**
Firewall management and monitoring
centralized, simple and secure

05_ **COMPUTER SYSTEMS**
Internet architects

06_ **VOICE OVER IP**
Local area networks and the Internet as a medium
transport for your voice communications

07_ **HOSTING**
Domain Hosting

08_ **VPS**
Virtual Server Hosting

09_ **MAIL CLEANUP**
Clean of viruses and spam

10_ **DELOCALIZED MAIL**
Mailboxes for the same domain
in different email systems

11_ **GOOGLE WORKSPACE**
Online tools for your company

12_ **OFFICE 365**
The latest productivity apps

13_ **ONLINE BACKUP**
Remote backup

14_ **PROXMOX BACKUP SERVER**
Backup data and virtual machines

15_ **CUSTOMIZED DEVELOPMENT**
Consulting specialized in
custom programming

16_ **SMART WATCH WEB**
Energy efficiency for refineries
and power plants

01

VIRTUALIZATION

Virtualization is the answer you need to reduce equipment acquisition and maintenance costs, both servers and workstations.

Computer virtualization refers to a mechanism through which it is possible to run several machines simultaneously within the same physical computer.

02

PROXMOX VE

We are SILVER PARTNER of Proxmox and the first TRAINING PARTNER approved to provide official Proxmox VE training in Spanish.

Proxmox Virtual Environment (Proxmox VE) is a hyperconverged virtualization solution. A cluster of Proxmox VE servers combined with a Ceph distributed storage system allows you to create a highly available virtualization infrastructure, with load balancing and very easy horizontal scalability. Proxmox VE facilitates the creation of our DRP (Disaster Recovery Plan), something crucial to maintain business operations in the event of disasters, guaranteeing the continuity and protection of essential data.

03

NETWORKS & SECURITY

Computer networks and computer security are two closely related concepts today.

Computer security is a pending issue for many companies. Information is one of the most important assets and you have to protect it. To do this, we offer network security/topology audit services, FireWalls and Virtual Private Networks (VPN).

04

FWCLOUD

Manage all your firewalls from anywhere and any device.

FWCloud is an Open Source project completely designed and developed by SOLTECSIS. It is a cloud application, which is essential to achieve the goal of being able to use it from anywhere, at any time and with any device.

05

COMPUTER SYSTEMS

We design and implement computer systems that will help improve your company's technological infrastructure.

We have highly qualified technical personnel with extensive experience in the design, programming, configuration, implementation and maintenance of a wide variety of Computer Systems.

06

VOICE OVER IP

Local area networks and the Internet as a means of transport for your voice communications.

Voice over Internet Protocol or VoIP allows you to use your local area networks and the Internet as a means of transport for your voice communications. Thanks to this, it is possible to obtain significant reductions in telephone costs since, instead of using a conventional telephone exchange, companies that implement VoIP telephone systems can use a virtual telephone exchange based on a physical server or a virtual server, much more economical and simple to maintain.

07

HOSTING

All the services you need for your domains.

DNS, WEB, FTP, email, AntiSpam, AntiVirus, WebMail, databases, e-commerce, dynamic content, online tools, etc. We have different hosting packages adapted to the requirements of each client.

08

VPS

Virtual server hosting.

Our virtual private server (VPS) service allows you to customize your servers according to your needs. You can count on our technical staff to define the most appropriate architecture and configuration to meet your requirements.

09

MAIL CLEANUP

Computer viruses and spam (junk mail) are today the main source of problems for email service users.

The functionality provided through our mail cleaning service is the removal of viruses and spam from messages destined for your mailboxes. We first receive all mail destined for your mailboxes into our systems and, once cleaned (viruses and spam removed), we forward it to your mail server. It is also possible to use it for outgoing mail.

10

DELOCALIZED MAIL

Place your domain's mailboxes on different servers.

Mailboxes for the same domain in different email systems. This system can be very interesting to save costs and improve the operations of our company's mail service.

11

GOOGLE WORKSPACE

Combine the versatility of Google Mail with a complete set of online tools for your business.

Google Workspace seamlessly integrates the business solutions your team needs into one package.

And now, with Gemini for Workspace, you can increase your organization's productivity and creativity with the power of generative AI.

12

OFFICE 365

A powerful set of online tools that includes email, calendar, document services and much more.

Microsoft 365 is a cloud-powered productivity platform. With a Microsoft 365 subscription, you get the latest productivity apps like Microsoft Teams, Word, Excel, PowerPoint, Outlook, and 1TB of OneDrive cloud storage, among others.

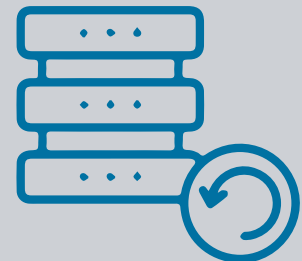

13

ONLINE **BACKUP**

Remote backup.

An Online Backup system allows you to make a backup copy of your organization's files or virtual machines, replicating them on other computers (the copy servers) to which you connect via the Internet.

A server room with blue lighting and rows of server racks. The racks are filled with server units, and the floor is highly reflective. The overall atmosphere is futuristic and high-tech.

14

PROXMOX BACKUP SERVER

Backup of data and virtual machines.

Proxmox Backup Server is an enterprise backup solution for backing up and restoring virtual machines, containers, and physical hosts.

15

CUSTOMIZED DEVELOPMENTS

We provide consulting services specialized in custom programming.

Our team of full-stack developers, work methodologies and collaborative tools such as GitHub/GitLab allow us to tackle any project in a structured and systematized way, adapting to the requirements and needs of your application.

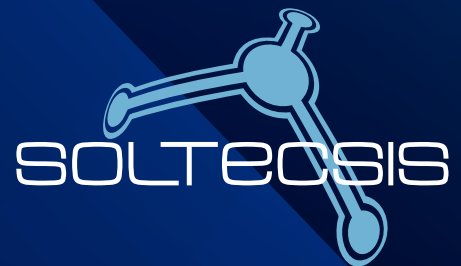

16

SMART WATCH WEB

Energy efficiency for refineries and power plants.

The SmartWatchWeb system allows the detection of leaks in industrial drains in real time, thanks to which it is possible to solve these leaks in the shortest period of time possible and thus avoid the enormous energy losses generated by them.
